ROOF RAFTER BRACKETS

Gutter systems usually mount directly to a building's fascia, which covers the ends of roof rafters. Some homes and cottages, however, have exposed roof rafters with no fascia boards. Where no fascia exists, Roof Rafter Brackets provide strong support mounts for your gutter system. **Questions?** Call our Customer Service department at the toll free number below.

Installing Roof Rafter Brackets

Determine roof slope and required bracket angle. (Fig. 1)

To bend, place in vice with the round hole at pinch point. Bend using locking pliers to required angle. (Fig. 2)

The 3-hole end (spaced at 3" o.c.) goes under the shingles or onto the Roof Board. (Fig. 3)

Mount Roof Rafter Bracket to roof board using appropriate fasteners. (Fig. 4)

Determine the desired mounting height and mount hooks to Roof Rafter Bracket using #8 x 1", bolt, locking washer and nut. (Fig.5)

Remember to slope your gutter system 1/8" for every 10' length to ensure proper drainage.
